

- Full Name (as registered with the University)
 - Yan Yang
- Github Username
 - windyita
- Email address
 - yang0211@uchicago.edu
- One paragraph summary of your app and its functionality
 - I want to complete a diary app.
 - The functions I will include:
 - view diary
 - upload diary to the server (Using core data)
 - add tags to the diary so that you can view diaries according to tags
 - add emotions to the diary so that you can view diaries according to emotions
 - add photo or choose photo from library to add to the diary
 - share diary with friends
 - The functions I probably will include:
 - account management
 - lock to the app
 - add music to the diary
 - notifications to users at the setted time to write diaries
 - some other customized features
- Embedded image of your apps interface (it does not need to be very fancy).
